

Model 1 Static Variables

Consider the definition for a bank account:

```
public class BankAccount {  
    private static final String PREFIX = "1234";  
    private static int nextNumber = 1;  
  
    private String number;  
    private String owner;  
    private double balance;  
  
    public BankAccount(String owner) {  
        this.number = PREFIX + String.format("%04d", nextNumber);  
        this.owner = owner;  
        nextNumber++;  
    }  
}
```

Here is a memory diagram of two BankAccount objects:

```
public static void main(String[] args) {  
    BankAccount ba1 = new BankAccount("Stacie");  
    BankAccount ba2 = new BankAccount("Trevor");  
}
```

Questions (15 min)

Start time:

1. Based on the source code and memory diagram:
 - a) How many `BankAccount` variables were declared?
 - b) How many `BankAccount` objects were created?
2. How many instances of each variable are in memory?
 - a) `PREFIX`
 - b) `nextNumber`
 - c) `number`
 - d) `owner`
 - e) `balance`
3. What is the difference between `static` and non-`static` variables of a class? Explain your answer in terms of the diagram.
4. Why are all the strings shown in separate boxes as opposed to being written inside of the variable boxes?
5. How would you modify the memory diagram if the following line were added at the end of the `main` method?

```
BankAccount ba3 = ba2;
```
6. (Optional) Paste the contents of `BankAccount.java` into [Java Visualizer](#). What differences do you notice between the diagram in Java Visualizer and those in Model 1?
